obs: Time on Time =>Corrected time = ToT * Elapsed time

With Time-on-time (ToT) scoring, the time allowance will increase progressively as the wind velocity increases. Course distance has no effect on the results and does not need to be measured. Corrected time will depend only on the elapsed time and the difference between two boats may be seen in seconds, depending on the duration of the races. The longer the race, the larger the handicap. The ToT method is used where tidal current is strong and when wind conditions are highly variable on the race course.

Course types

Each of time or distance scoring coefficients in above mentioned simple scoring options are given for different course types:

Inshore - as windward/leeward course around the buoys with 50% upwind and 50% downwind angles.

Offshore - used on coastal/long distance races where different wind directions may be expected.
